- 1- This table outlines basic information. However, just as each practice is unique, every EMR solution for a specific practice will also be unique. Therefore it is important to open a dialogue regarding your needs and your future plans.
- 2-This system is by far the most proven, complete and customized solution and thus the highest price. Therefore, each practice requires an RFP and a resulting tailored bid.
- 3- AdvancedMD has been around for over 20 years and is one of the best known in the industry. They have acquired Practice One for their EMR and have fully integrated the solution.
- 4- Due to the "moving target" of certification, the company will guarantee within 90 days of the final determination of what certification actually means and which body will do it, this EMR will qualify. This is unique from the rest of the industry because it has artificial intelligence. It currently is a stand alone system but we are able to package it with AdvancedMD for the Practice Management functions. The systems integrate seamlessly and the resulting system is very responsive.
- 5 - The prices quoted are a range of costs per professional for the application software. However EMR "done right" is a custom process; the final price and products are determined after a total needs assessment. Moreover, a successful implementation is customized to maximize the benefit the practice enjoys.
- 6 - Intuitive products have artificial intelligence that, based on your previous decisions, will finish the analyses for you. This takes about thirty hours of practice before the learning curve gives way to much faster charting.
- 7 - ASP, Application Service Provider. You own the license but it is hosted elsewhere - your server is located in a secure facility.
- 8 - SaaS, Software As a Service. You do not own the license but only subscribe to the service. This gives the vendor the most control over you.
- 9 - Client Server. You host the solution "in house" giving you the most control over your data but also the most responsibility for upkeep and maintenance of the system.
- 10-Client Server with Off Site Back Up. This gives you the most control as well as the most security. The tradeoff is that it is the most expensive.
